

## Aluminum Composite Panel

EURO ACP consists of 2 aluminum sheets laminated to a high grade, low density polyethylene core. The outer aluminum layers are covered with premium quality polyester and PVDF paints and then are protected with easy peel PE film to prevent scratches and dirt during transportation, processing and installation. Due to such a structure the panel has outstanding rigidity and flatness.

### Euro ACP Advantages:

- Very Rigid
- Superior Flatness
- Lightweight
- Ease of Fabrication
- Recyclability
- Withstands temperature variances from -58° F to 176° F
- Available in a number of colors, finishes and gloss levels
- Provides good sound insulation and dampens vibrations
